# HL7 for messaging

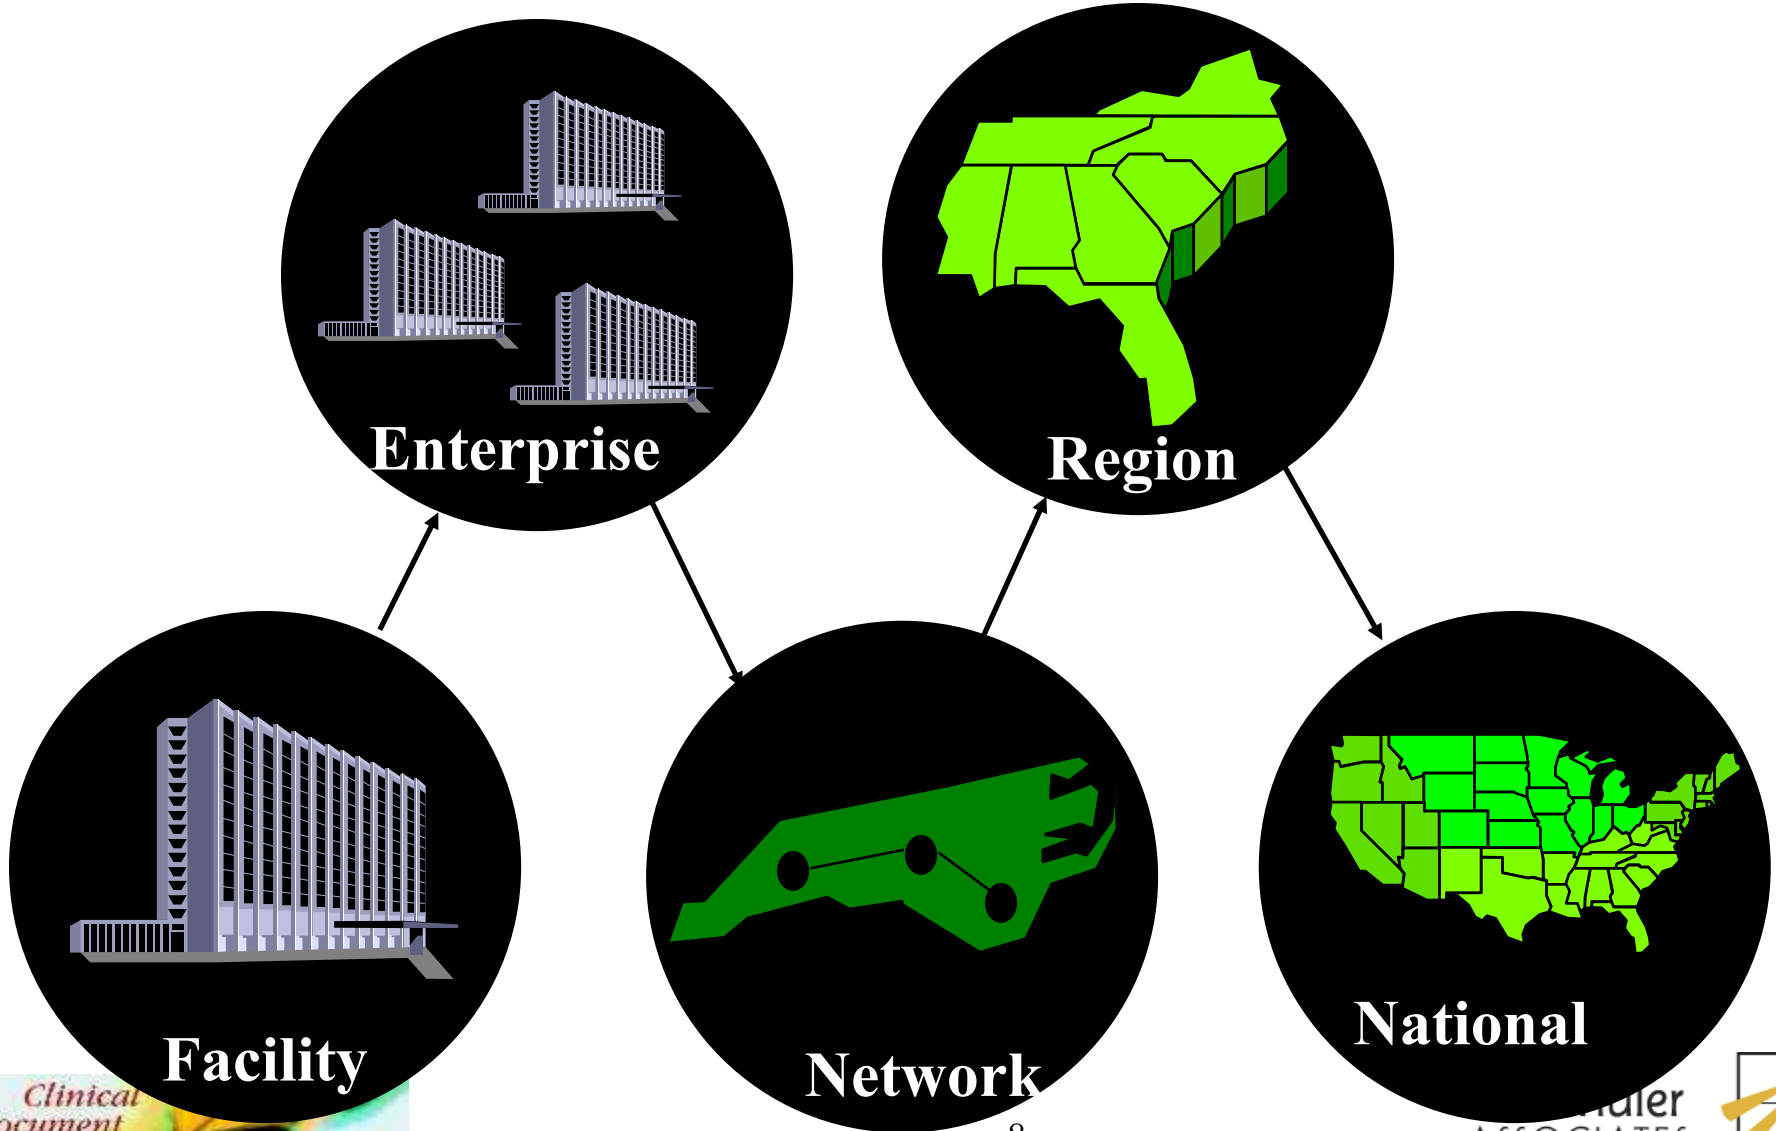

- It's all about the interface:

- Hospital-centric view of HIT

# HL7 beyond the hospital interface

- CCOW: multi-application context management, single sign-on
- Arden Syntax: decision support, guidelines
- Electronic Health Record: functional, system and interoperability models
- Reference Information Model (RIM)
- Clinical Document Architecture

# Outline

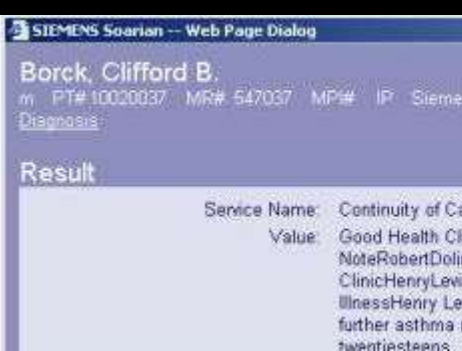

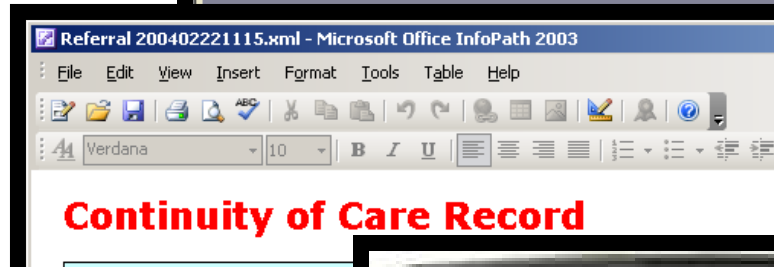

- HL7
- CDA
- CDA for exchange networks
- CDA+CCR=CCD
- Summary, Resources & Questions

# CDA

- Clinical Document Architecture
- ANSI/HL7 CDA R1.0–2000
- ANSI/HL7 CDA R2.0–2005
- A specification for document exchange using
  - XML,
  - the HL7 Reference Information Model (RIM)
  - Version 3 methodology
  - and vocabulary (SNOMED, ICD, local,...)

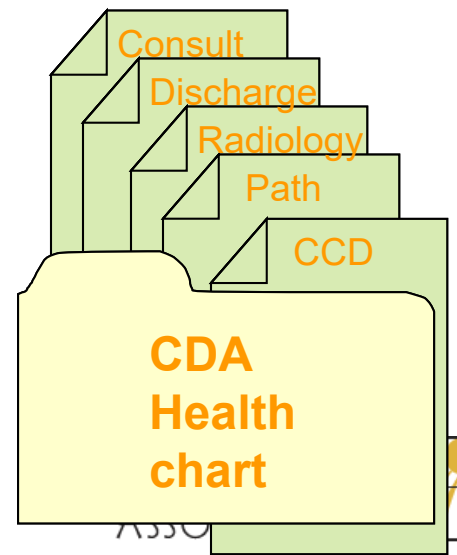

# CDA: A Document Exchange Specification

- This is a CDA
- and this
- and this
- and this
- and this
- and this
- and this

# CDA: electronic documents

- eDocuments for Interoperability
  - Many CDA documents comprise an individual electronic medical record
  - Key component for local, regional, national electronic health records
  - Gentle on-ramp to information exchange
    - Everyone uses documents
    - EMR compatible, no EMR required
    - All types of clinical documents

## Good Health

**Patient:** Henry Levin , the 7th  
**Birthdate:** September 24, 1932  
**Consultant:** Robert Dolin , MD

### History of Present Illness

Henry Levin, the 7<sup>th</sup> is a 67 year old male with a long history of asthma in his teens. He was hospitalized for asthma in his teens. He has been able to be weaned off steroid

### Past Medical History

- Asthma
- Hypertension (see HTN.cda for details)
- Osteoarthritis, right knee

### Medications

- Theodur 200mg BID
- Proventil inhaler 2puffs QID PRN
- Prednisone 20mg ad

# CDA Header: Metadata

```

## History of Present Illness

**Henry Levin, the 7<sup>th</sup>** is a 67 year old male referred for further asthma management. Onset of asthma in h was hospitalized twice last year, and already twice this year. He has not been able to be weaned off steroid several months.

## Past Medical History

- Asthma
- Hypertension (see HTN.cda for details)
- Osteoarthritis, right knee

## Medi

# Investing in Information

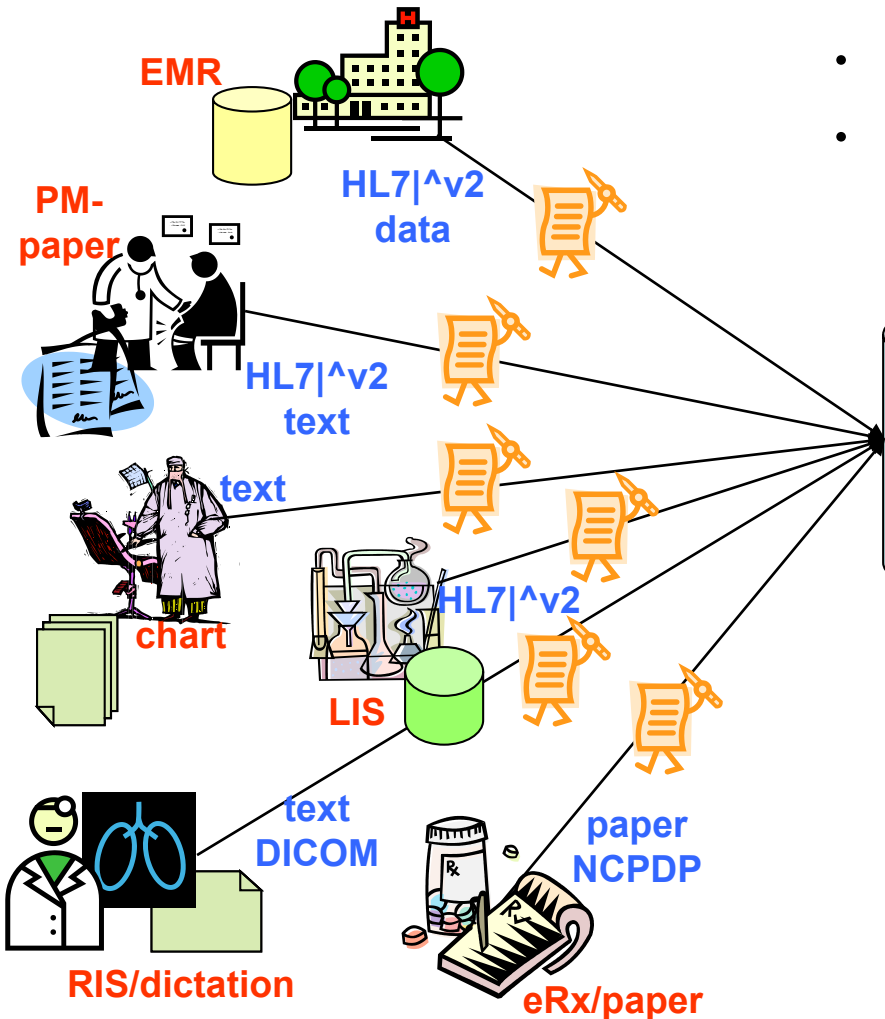

---

- CDA can be simple
- CDA can be complex
- Simple encoding relatively inexpensive
- Complex encoding costs more
- You get what you pay for:
  - like charging a battery,
  - the more detailed the encoding
  - the greater the potential for reuse

# Outline

- HL7
- CDA
- CDA for exchange networks
- CDA+CCR=CCD
- Summary, Resources & Questions

# CDA document-based network

- All transform to CDA
- View the complete record
- No loss in computable semantics

- EHR
- V-EHR
- PHR
- Patient Portal
- Physician Portal
- Health Record Bank

# CDA for Information Exchange

- International: basis of interoperability in most advanced national networks
  - Finland, Greece, Canada, Germany, Japan, Korea, France, Italy, New Zealand, Australia, and more
- US: Federal Health Architecture/CHI
  - CMS Notice of Proposed Rule Making
    - Claims attachments using CDA + X12
    - First pilot concluded, others underway
  - VA/DoD bi-directional exchange
- US: Document format for NHIN pilots, RHIO design
  - NHIN Pilots: preliminary architecture
  - HITSP: preliminary choice
  - IHE Medical Summary – CDA for NHIN/RHIO exchange

# Major Implementations (outside US)

---

- PICNIC (European Union)
- SCIPHOX (Germany)
- HYGElAnet/WebOnColl (Greece)
- Aluetietojärjestelmä (Finland)
- Health Information Summaries (New Zealand)
- Referrals (Australia)
- MERIT-9 (Japan)
- NHS (Wales)
- Buenos Aires HMO project (Argentina)
- Plus projects in France, Italy, Russia, Estonia, Taiwan, Korea...

# CDA: Investing in Information

---

- CDA at the Mayo Clinic
  - Initiated in 1999
  - About 50,000 documents each week
  - Clinical documents: Most important capital asset
- CDA at New York Presbyterian (was Col-Pres)
  - “CDA Philosophy”
  - Clinical notes contain critical information in narrative
  - Best format for information mining and aggregation across applications
  - 1 / 3 of all discharges summaries

# XML Value Chain

Allscripts Touchworks

Patient: LAWRENCE MCKNIGHT  
Birthdate: May 20, 1966  
Consultant: Timothy Weaver

Reason for Visit

Chief Complaint

Siemens Soarian (XML)

Patient: LAWRENCE MCKNIGHT  
Birthdate: May 20, 1966  
Consultant: Timothy Weaver

Reason for Visit

- visit for: follow-up exam

Chief Complaint

- back pain

Reason for Referral

Dr. Saibabu: This appears to be muscular strain.

History of Present Illness

- lower back pain radiating to the right toes

# ASTM's CCR

Designation: E 2369 – 05

ContinuityOfCareRecord

## Standard Specification for Continuity of Care Record (CCR)<sup>1</sup>

This standard is issued under the fixed designation E 2369; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon ( $\epsilon$ ) indicates an editorial change since the last revision or reapproval.

### 1. Scope

1.1 The Continuity of Care Record (CCR) is a core data set of the most relevant administrative, demographic, and clinical information facts about a patient's healthcare, covering one or more healthcare encounters.<sup>2</sup> It provides a means for one healthcare practitioner, system, or setting to aggregate all of the pertinent data about a patient and forward it to another practitioner, system, or setting to support the continuity of care.

1.1.1 The CCR data set includes a summary of the patient's health status (for example, problems, medications, allergies) and basic information about insurance, advance directives, care documentation, and the patient's care plan. It also includes identifying information and the purpose of the CCR. (See 5.1 for a description of the CCR's components and sections, and Annex A1 for the detailed data fields of the CCR.)

of use cases and workflows. Any examples offered in this specification are not to be considered normative.<sup>4</sup>

1.3 To ensure interchangeability of electronic CCRs, this specification specifies XML coding that is required when the CCR is created in a structured electronic format.<sup>5</sup> This specified XML coding provides flexibility that will allow users to prepare, transmit, and view the CCR in multiple ways, for example, in a browser, as an element in a Health Level 7 (HL7) message or CDA compliant document, in a secure email, as a PDF file, as an HTML file, or as a word processing document. It will further permit users to display the fields of the CCR in multiple formats.

1.3.1 The CCR XML schema or .xsd (see the Adjunct to this specification) is defined as a data object that represents a snapshot of a patient's relevant administrative, demographic,

# ASTM CCR vs. HL7 CDA

- Conflicting?
- Overlapping?
- What if you could have both!#\*?!  
– What if you could have your data elements  
– And send them in a common exchange framework?

# ASTM CCR + HL7 CDA = CCD

- CDA is designed to incorporate professional society recommendations, clinical practice guidelines, standardized data sets, etc.
- From the perspective of CDA, the ASTM CCR is a standardized data set that can be used to constrain CDA specifically for summary documents.
- The resulting specification, known as the Continuity of Care Document (CCD), is being developed as a collaborative effort between ASTM and HL7.

# ASTM's CCR

Designation: E 2369 – 05

ContinuityOfCareRecord

## Standard Specification for Continuity of Care Record (CCR)<sup>1</sup>

This standard is issued under the fixed designation E 2369; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon ( $\epsilon$ ) indicates an editorial change since the last revision or reapproval.

### 1. Scope

1.1 The Continuity of Care Record (CCR) is a core data set of the most relevant administrative, demographic, and clinical information facts about a patient's healthcare, covering one or more healthcare encounters.<sup>2</sup> It provides a means for one healthcare practitioner, system, or setting to aggregate all of the pertinent data about a patient and forward it to another practitioner, system, or setting to support the continuity of care.

1.1.1 The CCR data set includes a summary of the patient's health status (for example, problems, medications, allergies) and basic information about insurance, advance directives, care documentation, and the patient's care plan. It also includes identifying information and the purpose of the CCR. (See 5.1 for a description of the CCR's components and sections, and Annex A1 for the detailed data fields of the CCR.)

of use cases and workflows. Any examples offered in this specification are not to be considered normative.<sup>4</sup>

1.3 To ensure interchangeability of electronic CCRs, this specification specifies XML coding that is required when the CCR is created in a structured electronic format.<sup>5</sup> This specified XML coding provides flexibility that will allow users to prepare, transmit, and view the CCR in multiple ways, for example, in a browser, as an element in a Health Level 7 (HL7) message or CDA compliant document, in a secure email, as a PDF file, as an HTML file, or as a word processing document. It will further permit users to display the fields of the CCR in multiple formats.

1.3.1 The CCR XML schema or .xsd (see the Adjunct to this specification) is defined as a data object that represents a snapshot of a patient's relevant administrative, demographic,

# Continuity of Care Document

- CCD maps the CCR elements into a CDA representation.

CCR data element	CDA R2 correspondence
Results	Section
Result	Observation
DateTime	Observation.effectiveTime
IDs	Observation.id
Type: Values include: Hematology, Chemistry, Serology, Virology, Toxicology, Microbiology, Imaging – X-ray, Ultrasound, CT, MRI, Angiography, Cardiac Echo, Nuclear Medicine, Pathology, Procedure	Draw values from observation.code (e.g. by looking at the LOINC class for a LOINC code).
Description	Observation.code
Status	Observation.statusCode
Procedure	Observation.methodCode; Procedure
Test	Observation

# Continuity of Care Document

- Did this come out of the blue?
- There is a history of collaboration
  - Many people have participated in both efforts
  - Presentation on CDA for continuity of care at ASTM CCR meeting, August, 2003
  - Memorandum of Understanding, 2004
  - Acapulco demo: CDA for CCR, October, 2004
    - HL7 partnered with Massachusetts Medical Society, Microsoft, Ramsey Systems (UK)
  - Initial HL7 Care Record Summary ballot, April, 2005:
    - Limited to CDA header, no detailed section coding
    - Anticipated: “Development of detailed (CDA Level 3) Implementation Guides for “continuity of care” (CCR) in collaboration with the ASTM E31 under the 2004 Memorandum of Understanding”
  - HL7 ballot on CCR, Spring 2005: incorporated changes required for bi-directional exchange and semantic interoperability

- “ASTM is dedicated and privileged to work in collaboration with HL7 on the expression of ASTM's Continuity of Care Record content within HL7's CDA XML syntax and the seamless transformation of clinical and administrative data between the two standards.”
- Rick Peters, MD, E31.28

- Benefits
  - Industry consensus on summary document contents and requirements through ASTM ballots (2004, 2005)
  - Industry consensus on document exchange framework through HL7 ballots (1999–2005)
  - Summaries for continuity of care
    - Interoperable with full range of document types
    - Interoperable with HL7 V3 messages, all RIM-based specifications (public health reporting, clinical trials, structured product labels and more)

# Outline

- HL7
- CDA
- CDA for exchange networks
- CDA+CCR=CCD
- Summary, Resources & Questions

# CDA for Interoperability

- HL7/ANSI specification based on
  - Reference Information Model (RIM)
  - Extensible Markup Language (XML)
  - Standard Terminology
- The spec:
  - Header+Human-readable report+(optional) computable semantics
- Industry acceptance:
  - Internationally implemented for 6 years
  - US: FHA, CHI, CMS, VA, DoD, NHIN, HITSP...
  - Vendor support: strong & growing
- Interoperability
  - Full patient record, not just the data that can be coded today
  - Full patient record – summaries and more, implementation guides in the works from multiple professional societies and agencies

# Current Work

---

- HL7
  - Continuity of Care Document (with ASTM)
  - Pathology reports (with CAP)
  - Imaging reports (with DICOM)
  - Claims attachments, migrate from R1 (with CMS)
  - Medical Summary (with IHE, EHR Vendors Association)
  - Dental reports (with ADA)
  - Anesthesiology Reports (with Anes SIG)
  - Public health reports (with CDC)
  - ... *What should we be doing to develop standard documents for LTC?*
