HL7 for messaging

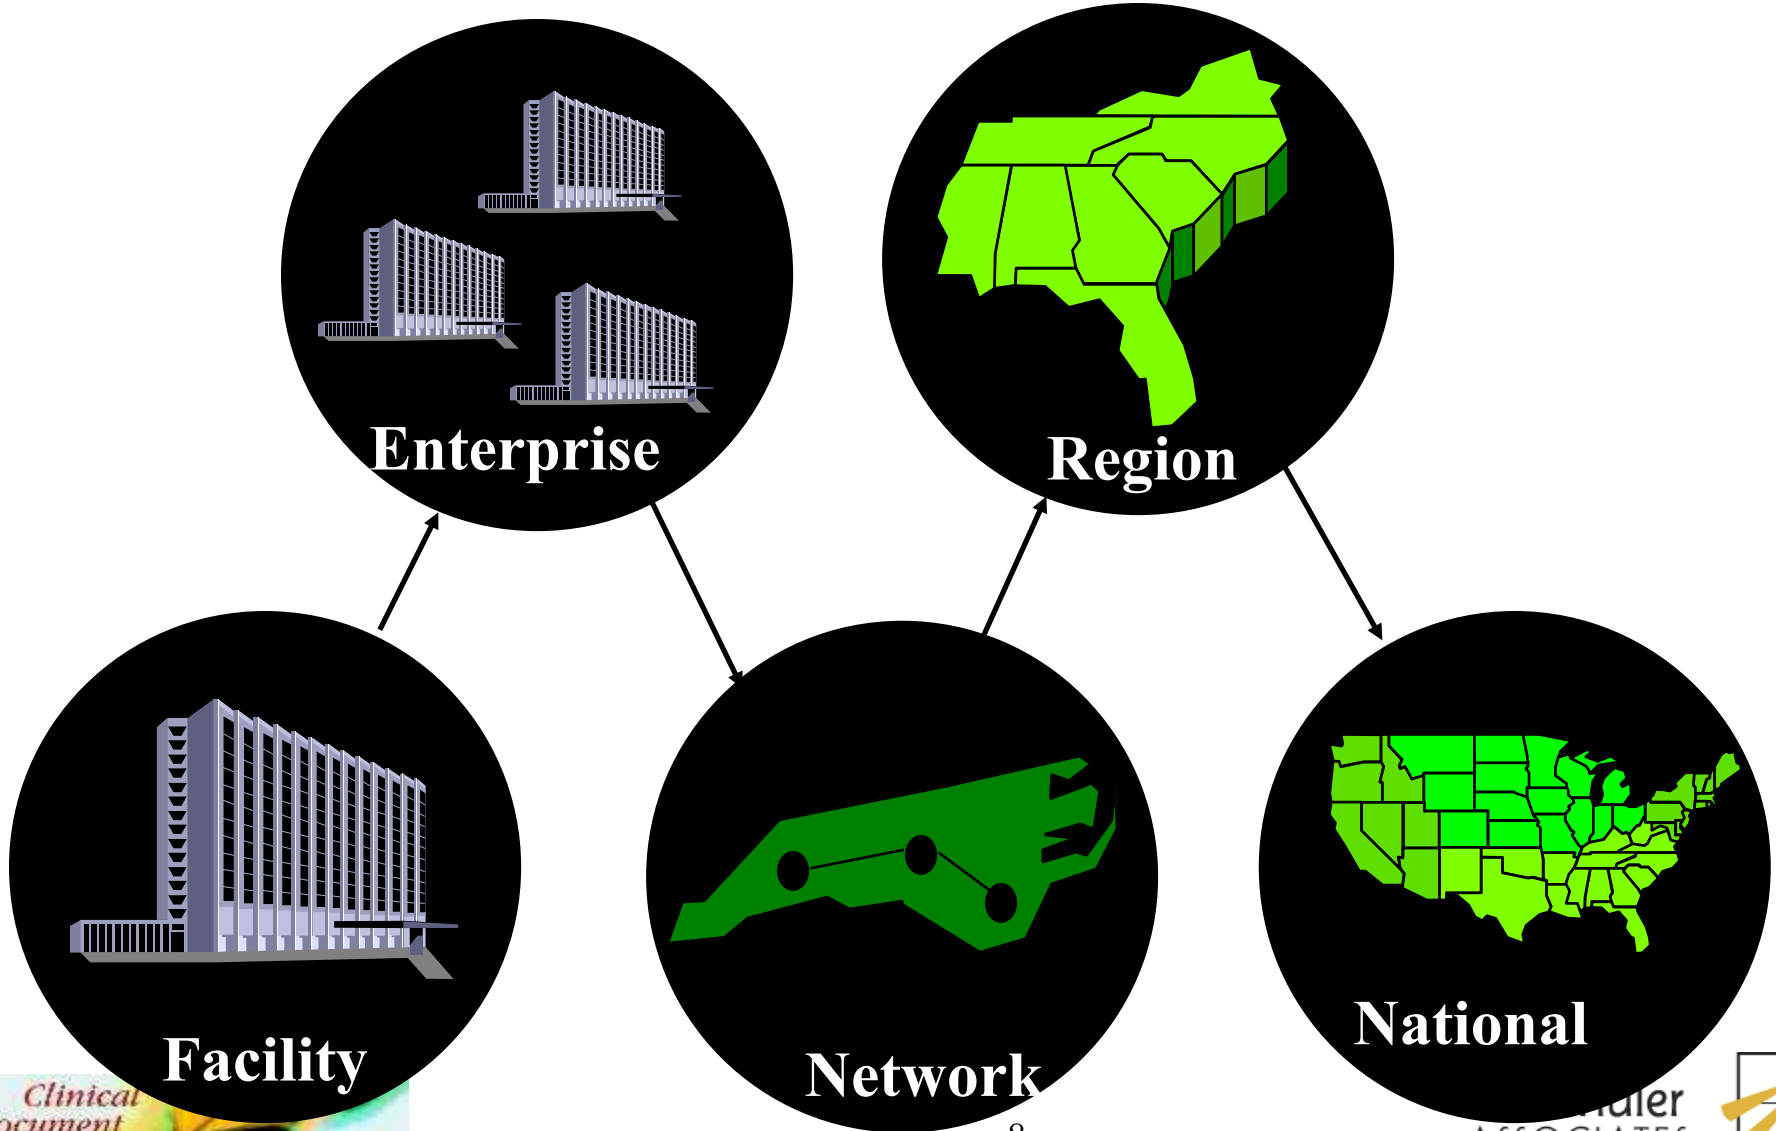

- It's all about the interface:

- Hospital-centric view of HIT

HL7 beyond the hospital interface

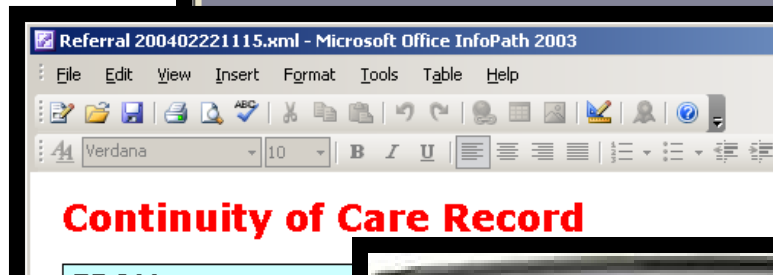

- CCOW: multi-application context management, single sign-on
- Arden Syntax: decision support, guidelines
- Electronic Health Record: functional, system and interoperability models
- Reference Information Model (RIM)
- Clinical Document Architecture

CDA

- Clinical Document Architecture
- ANSI/HL7 CDA R1.0–2000
- ANSI/HL7 CDA R2.0–2005
- A specification for document exchange using
 - XML,
 - the HL7 Reference Information Model (RIM)
 - Version 3 methodology
 - and vocabulary (SNOMED, ICD, local,...)

CDA: A Document Exchange Specification

- This is a CDA
- and this
- and this
- and this
- and this
- and this
- and this

CDA: electronic documents

- eDocuments for Interoperability
 - Many CDA documents comprise an individual electronic medical record
 - Key component for local, regional, national electronic health records
 - Gentle on-ramp to information exchange
 - Everyone uses documents
 - EMR compatible, no EMR required
 - All types of clinical documents

Good Health

Patient: Henry Levin , the 7th
Birthdate: September 24, 1932
Consultant: Robert Dolin , MD

History of Present Illness

Henry Levin, the 7th is a 67 year old male with a long history of asthma in his teens. He was hospitalized for asthma attacks and has been able to be weaned off steroid therapy.

Past Medical History

- Asthma
- Hypertension (see HTN.cda for details)
- Osteoarthritis, right knee

Medications

- Theodur 200mg BID
- Proventil inhaler 2puffs QID PRN
- Prednisone 20mg qd

CDA Header: Metadata

```

History of Present Illness

Henry Levin, the 7th is a 67 year old male referred for further asthma management. Onset of asthma in h was hospitalized twice last year, and already twice this year. He has not been able to be weaned off steroid several months.

Past Medical History

- Asthma
- Hypertension (see HTN.cda for details)
- Osteoarthritis, right knee

Medi

Investing in Information

- CDA can be simple
- CDA can be complex
- Simple encoding relatively inexpensive
- Complex encoding costs more
- You get what you pay for:
 - like charging a battery,
 - the more detailed the encoding
 - the greater the potential for reuse

Outline

- The HL7 CDA
- CDA for Health Information Exchange
- CDA + CCR = CCD
- CDA Document Types
- CDA for Personal Health Records
- Summary, Resources & Questions

CDA for Information Exchange

- International: basis of interoperability in most advanced national networks
 - Finland, Greece, Canada, Germany, Japan, Korea, France, Italy, New Zealand, Australia, and more
- US: Federal Health Architecture/CHI
 - CMS Notice of Proposed Rule Making
 - Claims attachments using CDA + X12
 - First pilot concluded, others underway
 - VA/DoD bi-directional exchange
- US: Document format for NHIN pilots, RHIO design
 - NHIN Pilots: preliminary architecture
 - HITSP: preliminary choice
 - IHE Medical Summary – CDA for NHIN/RHIO exchange

Major Implementations (outside US)

- PICNIC (European Union)
- SCIPHOX (Germany)
- HYGElAnet/WebOnColl (Greece)
- Aluetietojärjestelmä (Finland)
- Health Information Summaries (New Zealand)
- Referrals (Australia)
- MERIT-9 (Japan)
- NHS (Wales)
- Buenos Aires HMO project (Argentina)
- Plus projects in France, Italy, Russia, Estonia, Taiwan, Korea...

CDA: Investing in Information

- CDA at the Mayo Clinic
 - Initiated in 1999
 - About 50,000 documents each week
 - Clinical documents: Most important capital asset
- CDA at New York Presbyterian (was Col-Pres)
 - “CDA Philosophy”
 - Clinical notes contain critical information in narrative
 - Best format for information mining and aggregation across applications
 - 1 / 3 of all discharges summaries

ASTM's CCR

Designation: E 2369 – 05

ContinuityOfCareRecord

Standard Specification for Continuity of Care Record (CCR)¹

This standard is issued under the fixed designation E 2369; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 The Continuity of Care Record (CCR) is a core data set of the most relevant administrative, demographic, and clinical information facts about a patient's healthcare, covering one or more healthcare encounters.² It provides a means for one healthcare practitioner, system, or setting to aggregate all of the pertinent data about a patient and forward it to another practitioner, system, or setting to support the continuity of care.

1.1.1 The CCR data set includes a summary of the patient's health status (for example, problems, medications, allergies) and basic information about insurance, advance directives, care documentation, and the patient's care plan. It also includes identifying information and the purpose of the CCR. (See 5.1 for a description of the CCR's components and sections, and Annex A1 for the detailed data fields of the CCR.)

of use cases and workflows. Any examples offered in this specification are not to be considered normative.⁴

1.3 To ensure interchangeability of electronic CCRs, this specification specifies XML coding that is required when the CCR is created in a structured electronic format.⁵ This specified XML coding provides flexibility that will allow users to prepare, transmit, and view the CCR in multiple ways, for example, in a browser, as an element in a Health Level 7 (HL7) message or CDA compliant document, in a secure email, as a PDF file, as an HTML file, or as a word processing document. It will further permit users to display the fields of the CCR in multiple formats.

1.3.1 The CCR XML schema or .xsd (see the Adjunct to this specification) is defined as a data object that represents a snapshot of a patient's relevant administrative, demographic,

ASTM CCR vs. HL7 CDA

- Conflicting?
- Overlapping?
- What if you could have both!#*?!
– What if you could have your data elements
– And send them in a common exchange framework?

ASTM CCR + HL7 CDA = CCD

- CDA is designed to provide professional society recommendations, clinical practice guidelines, standardized data sets, etc.
- From the perspective of CDA, the ASTM CCR is a standardized data set that can be used to constrain CDA specifically for summary documents.
- The resulting specification, known as the Continuity of Care Document (CCD), is being developed as a collaborative effort between ASTM and HL7.

ASTM's CCR

Designation: E 2369 – 05

ContinuityOfCareRecord

Standard Specification for Continuity of Care Record (CCR)¹

This standard is issued under the fixed designation E 2369; the number immediately following the designation indicates the year of original adoption or, in the case of revision, the year of last revision. A number in parentheses indicates the year of last reapproval. A superscript epsilon (ϵ) indicates an editorial change since the last revision or reapproval.

1. Scope

1.1 The Continuity of Care Record (CCR) is a core data set of the most relevant administrative, demographic, and clinical information facts about a patient's healthcare, covering one or more healthcare encounters.² It provides a means for one healthcare practitioner, system, or setting to aggregate all of the pertinent data about a patient and forward it to another practitioner, system, or setting to support the continuity of care.

1.1.1 The CCR data set includes a summary of the patient's health status (for example, problems, medications, allergies) and basic information about insurance, advance directives, care documentation, and the patient's care plan. It also includes identifying information and the purpose of the CCR. (See 5.1 for a description of the CCR's components and sections, and Annex A1 for the detailed data fields of the CCR.)

of use cases and workflows. Any examples offered in this specification are not to be considered normative.⁴

1.3 To ensure interchangeability of electronic CCRs, this specification specifies XML coding that is required when the CCR is created in a structured electronic format.⁵ This specified XML coding provides flexibility that will allow users to prepare, transmit, and view the CCR in multiple ways, for example, in a browser, as an element in a Health Level 7 (HL7) message or CDA compliant document, in a secure email, as a PDF file, as an HTML file, or as a word processing document. It will further permit users to display the fields of the CCR in multiple formats.

1.3.1 The CCR XML schema or .xsd (see the Adjunct to this specification) is defined as a data object that represents a snapshot of a patient's relevant administrative, demographic,

Continuity of Care Document

- CCD maps the CCR elements into a CDA representation.

CCR data element	CDA R2 correspondence
Results	Section
Result	Observation
DateTime	Observation.effectiveTime
IDs	Observation.id
Type: Values include: Hematology, Chemistry, Serology, Virology, Toxicology, Microbiology, Imaging – X-ray, Ultrasound, CT, MRI, Angiography, Cardiac Echo, Nuclear Medicine, Pathology, Procedure	Draw values from observation.code (e.g. by looking at the LOINC class for a LOINC code).
Description	Observation.code
Status	Observation.statusCode
Procedure	Observation.methodCode; Procedure
Test	Observation

Continuity of Care Document

- Did this come out of the blue?
- There is a history of collaboration
 - Many people have participated in both efforts
 - Presentation on CDA for continuity of care at ASTM CCR meeting, August, 2003
 - Memorandum of Understanding, 2004
 - Acapulco demo: CDA for CCR, October, 2004
 - HL7 partnered with Massachusetts Medical Society, Microsoft, Ramsey Systems (UK)
 - Initial HL7 Care Record Summary ballot, April, 2005:
 - Limited to CDA header, no detailed section coding
 - Anticipated: “Development of detailed (CDA Level 3) Implementation Guides for “continuity of care” (CCR) in collaboration with the ASTM E31 under the 2004 Memorandum of Understanding”
 - HL7 ballot on CCR, Spring 2005: incorporated changes required for bi-directional exchange and semantic interoperability

- “ASTM is dedicated and privileged to work in collaboration with HL7 on the expression of ASTM's Continuity of Care Record content within HL7's CDA XML syntax and the seamless transformation of clinical and administrative data between the two standards.”
- Rick Peters, MD, E31.28

- Benefits
 - Industry consensus on summary document contents and requirements through ASTM ballots (2004, 2005)
 - Industry consensus on document exchange framework through HL7 ballots (1999–2005)
 - Summaries for continuity of care
 - Interoperable with full range of document types
 - Interoperable with HL7 V3 messages, all RIM-based specifications (public health reporting, clinical trials, structured product labels and more)

Outline

- The HL7 CDA
- CDA for Health Information Exchange
- CDA + CCR = CCD
- CDA Document Types
- CDA for Personal Health Records
- Summary, Resources & Questions

Medication information in CDA

- Works for CCR
- Works for IHE
- Works for AHIC
- What about *our* requirements?
- Can CDA accommodate the AHIP Medication data elements?
- How expressive is CDA?

AHIP Medication data elements mapped to CDA/CCD

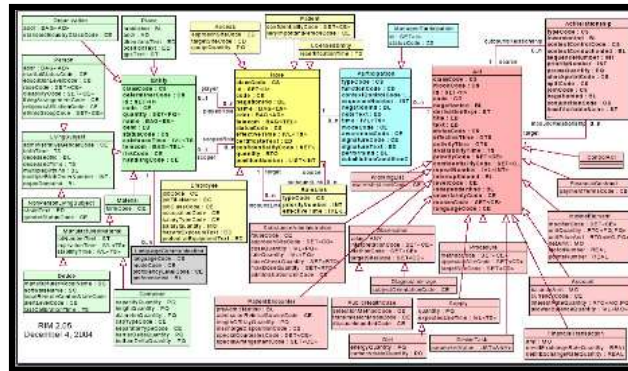

2	3	4	A	B	C	N	O
1			AHIP PHR Standard Definition (Draft)		CDA R2 (CCD) Mapping		
2					Candidate Data Element		
3						Mapped CDA component (full path, starting with focal act)	Comments
347	6		6. Medication				
348			6.010	Alerts		- see comments -	Alerts are in a different section of CCD. Refer to Allergies and Adverse Reactions section.
349			6.015	Medication ID		SubstanceAdministration / id	
352			6.020	Medication Name		SubstanceAdministration / consumable / manufacturedProduct / labeledDrug / name	
356			6.030	Prescription Date		Supply / effectiveTime	The RIM distinguishes between a SubstanceAdministration and a Supply. The former has attribution relating to the administration act, whereas the latter has attribution relating to the dispensing act. A prescription includes both - instructions for administering the drug and instructions for dispensing.
359			6.040	Duration		SubstanceAdministration / effectiveTime	
362			6.050	Dosage		SubstanceAdministration / doseQuantity	The dose may be precoordinated in the drug code itself, e.g. SNOMED code 318434003 is "atenelol 25 mg tablet", in which case doseQuantity is a unitless number indicating how many tablets to give with each administration.
365			6.055	Unit of Measure		- see comments -	All HL7 V3 Physical Quantity data types require UCUM codes for unit of measure.
368			6.060	Form		SubstanceAdministration / consumable / manufacturedProduct / labeledDrug / code	The form is precoordinated in the drug code itself, e.g. SNOMED code 318434003 is "atenelol 25 mg tablet".
371			6.070	Frequency		SubstanceAdministration / effectiveTime	
375			6.080	Instruction		- see comments -	Instructions are expressed as plain text (in Section.text) and the instruction components are stored in different attributes - for frequency, number to dispense, strength, etc.
378			6.090	Quantity		Supply / quantity	
			6.095	Quantity Dispensed		Supply / quantity	The CCD Medications section is a summary of events. Therefore Supply.quantity refers to the quantity dispensed. In the Plan of Care section, quantity ordered can be expressed.

Medication information in CDA

- Works for CCD
- Works for IHE
- Works for AHIC
- What about our requirements?
- Can CDA accommodate the AHIP Medication data elements?
- How expressive is CDA?
 - *As expressive as the HL7 RIM*

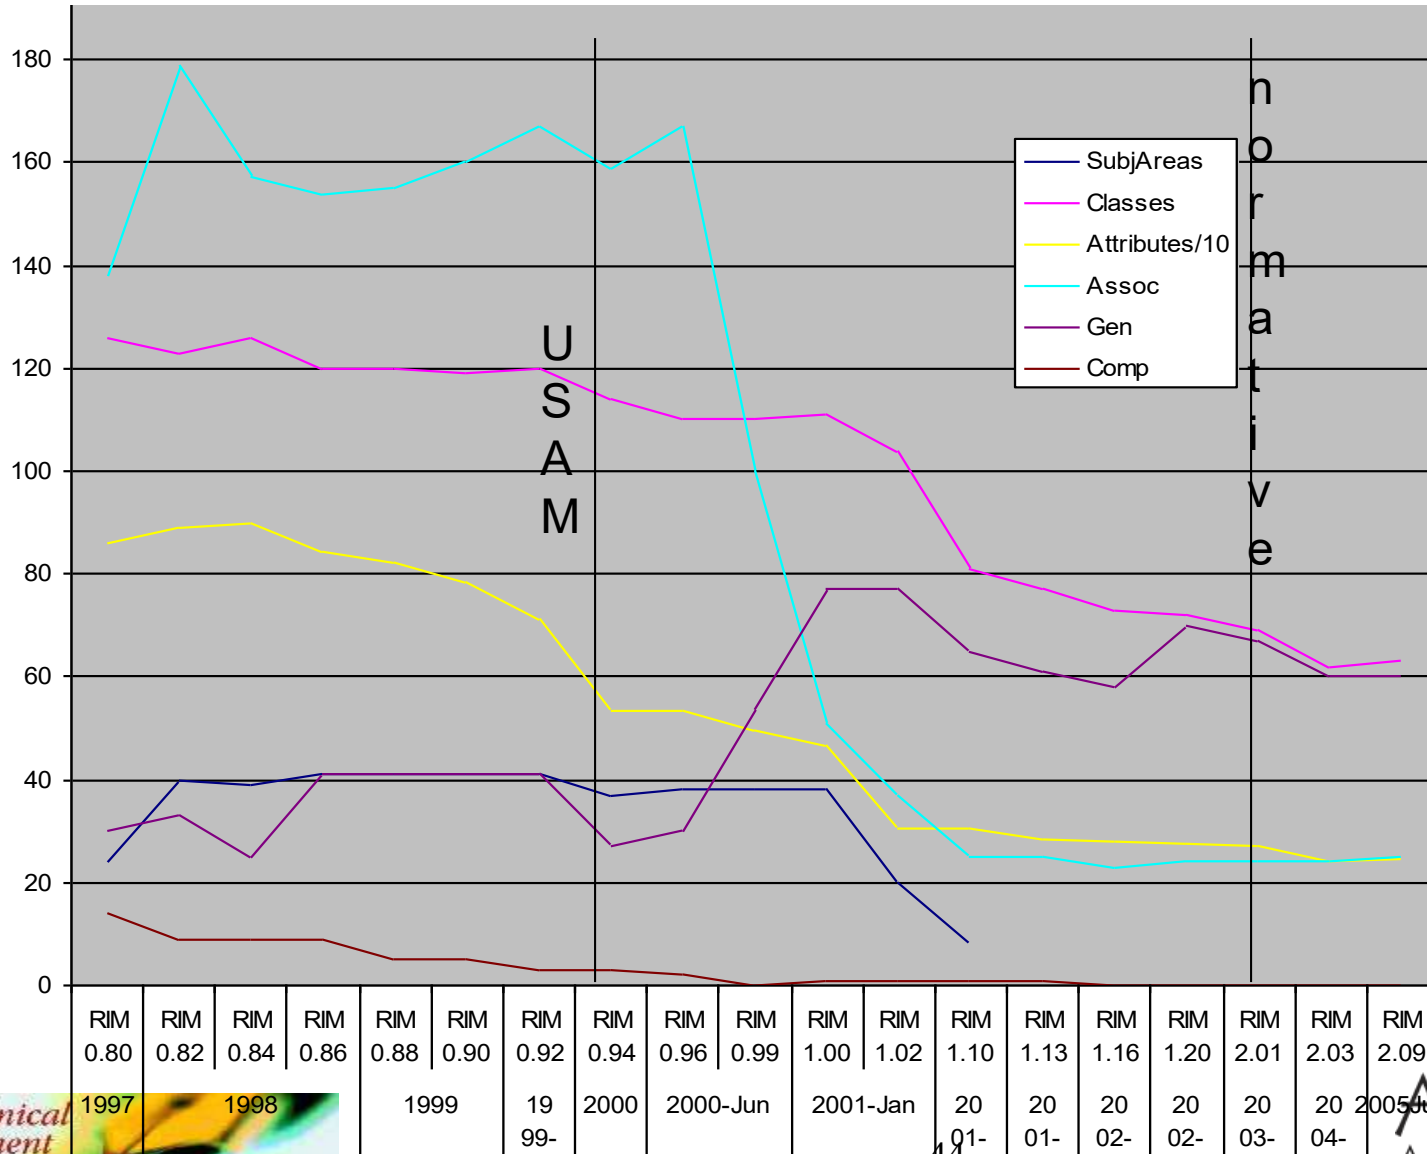

The HL7 RIM

- Where did it come from and how is it developed?

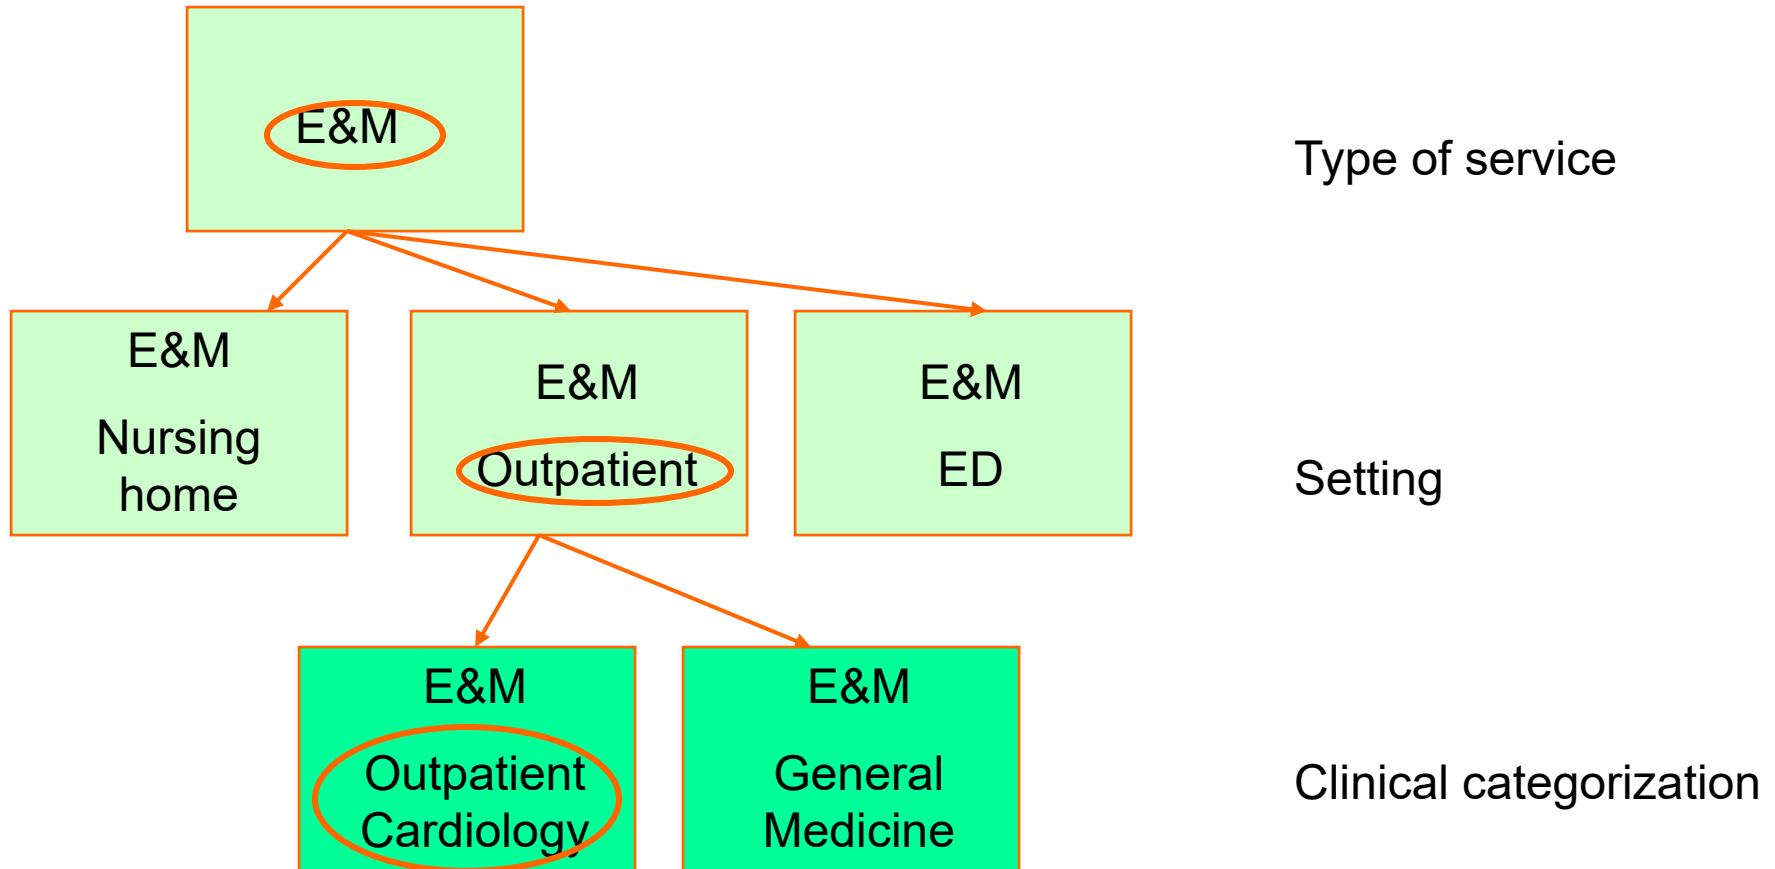

- Requirements applied to RIM
 - From V2 and new applications
 - From other standards organizations
 - From users
- RIM harmonization is a continual process
 - But it doesn't just grow...

Rise & fall & rise of the RIM

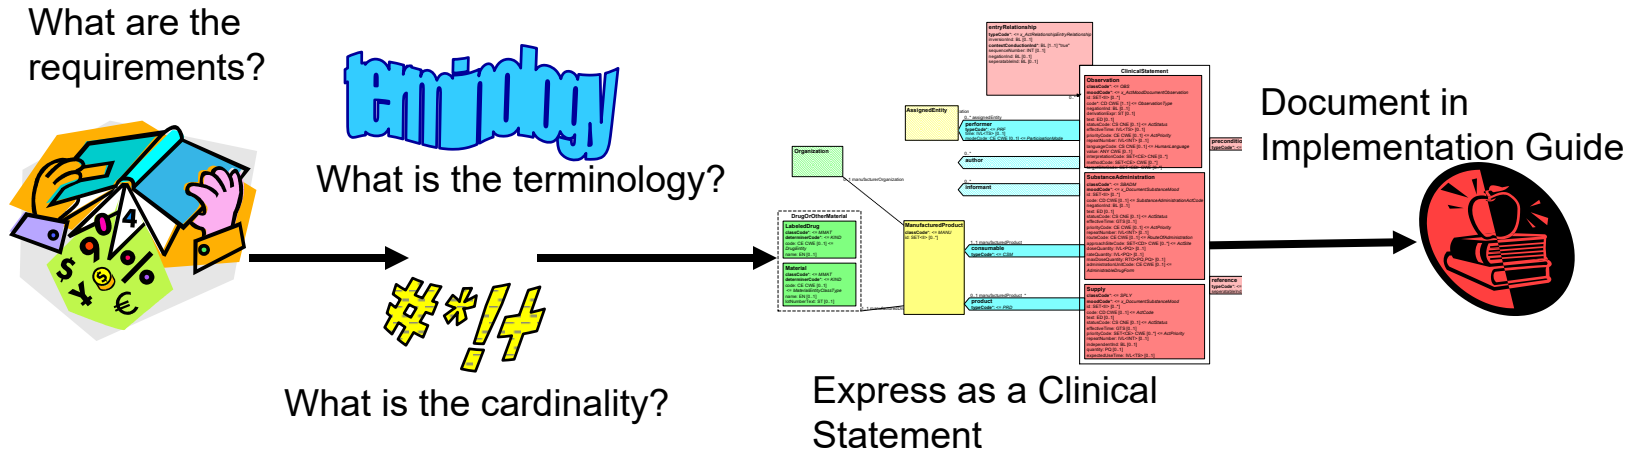

Document typology

CDA Implementation Guides

Role of Domain Experts and Users:

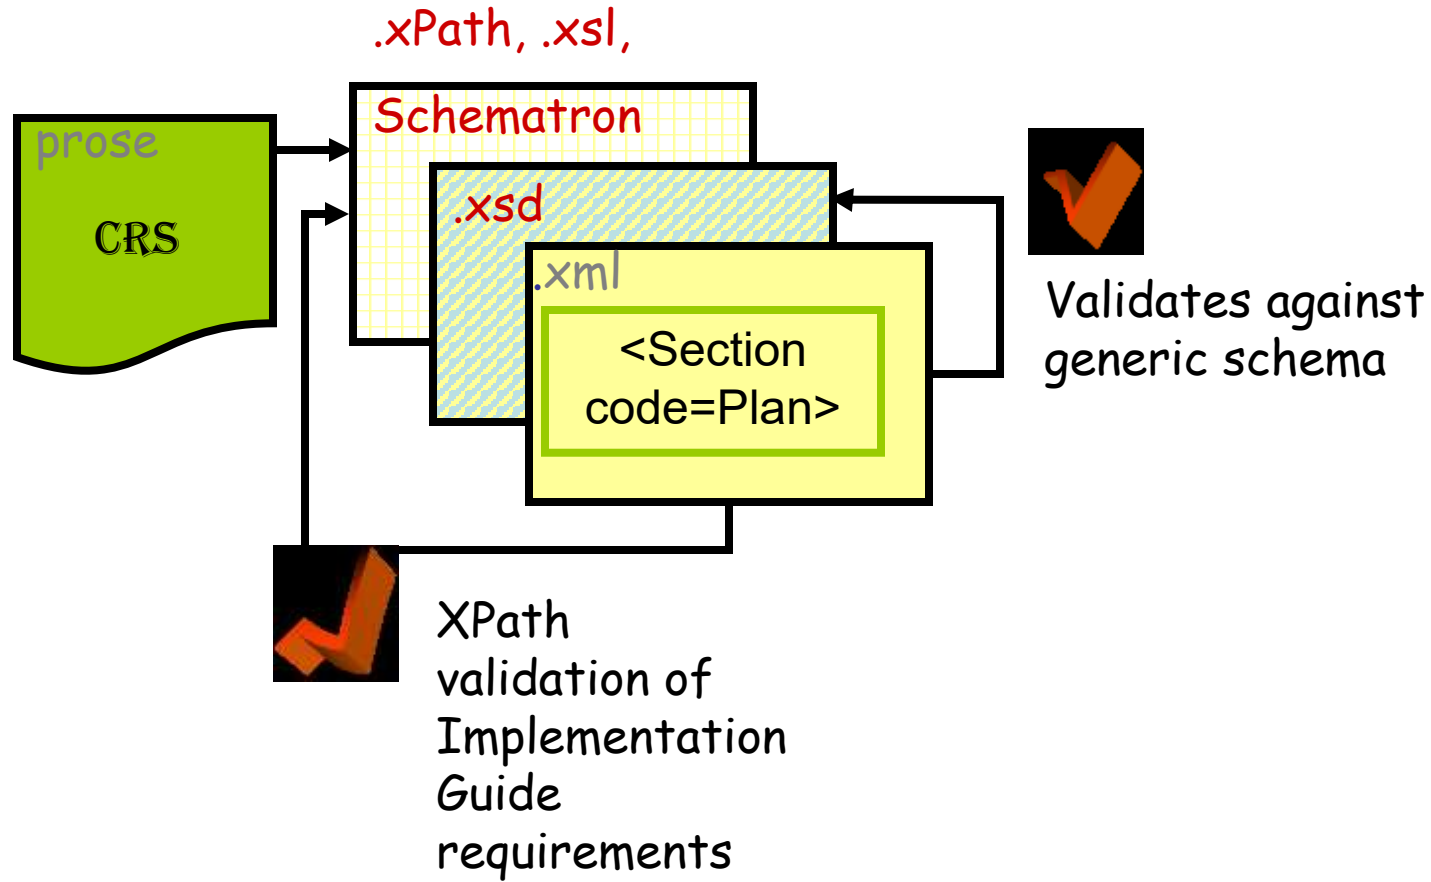

- Define requirements
- Provide resources

Role of Structured Documents TC:

- Assess scope
- Compare against existing Guides
- Quality control
- Sponsor ballot

Validating CDA document types

Outline

- The HL7 CDA
- CDA for Health Information Exchange
- CDA + CCR = CCD
- CDA Document Types
- CDA for Personal Health Records
- Summary, Resources & Questions

Requirements for a PHR: Summary

- Patient–centric, patient–directed
- Open interface/data specs
- Comprehensive record
- Supports re–use

Requirements for a PHR: #1

- Patient–centric, patient–directed
 - “mine”, irrespective of Plan, provider, location
 - Plan can change
 - Providers compete, overlap, are replaced
 - US healthcare does not layout neatly along geographical boundaries
 - Patient controls access privileges
 - Confidentiality at document, section level
 - Within limits of HIPAA, within PTO

Requirements for a PHR: #2

- Universal, open interface, data format
 - All can contribute
 - Application independent
 - Vendor independent
- Data supplied from all sources
- Not proprietary, works with any vendor's tools

Requirements for a PHR: #3

- Receives, catalogs, all aspects of health record
 - Provider notes
 - Lab and imaging
 - Pharmacy
 - Dental
 - CAM
 - Patient–provided information

Requirements for a PHR: #4

- Data available for re-use
 - Reimbursement, pay for performance
 - Practice management, decision support
 - Public health
 - Clinical trials
- *(some restrictions will apply)*

CDA PHR: Patient-centric, Patient-directed

- Each source record is a complete document with patient metadata sufficient to support eMPI
- Each encounter with the healthcare system results in one or more such documents
- Confidentiality can be specified for the document as a whole or pieces of it

CDA PHR: Open Interface

- An open standard: all applications can import/export
- CDA can be the payload in any type of communication message

CDA PHR: Comprehensive

- CDA can be any type of clinical document
- With incremental approach, all can play
- *The CDA PHR can be the full chart*

CDA PHR: Re-use

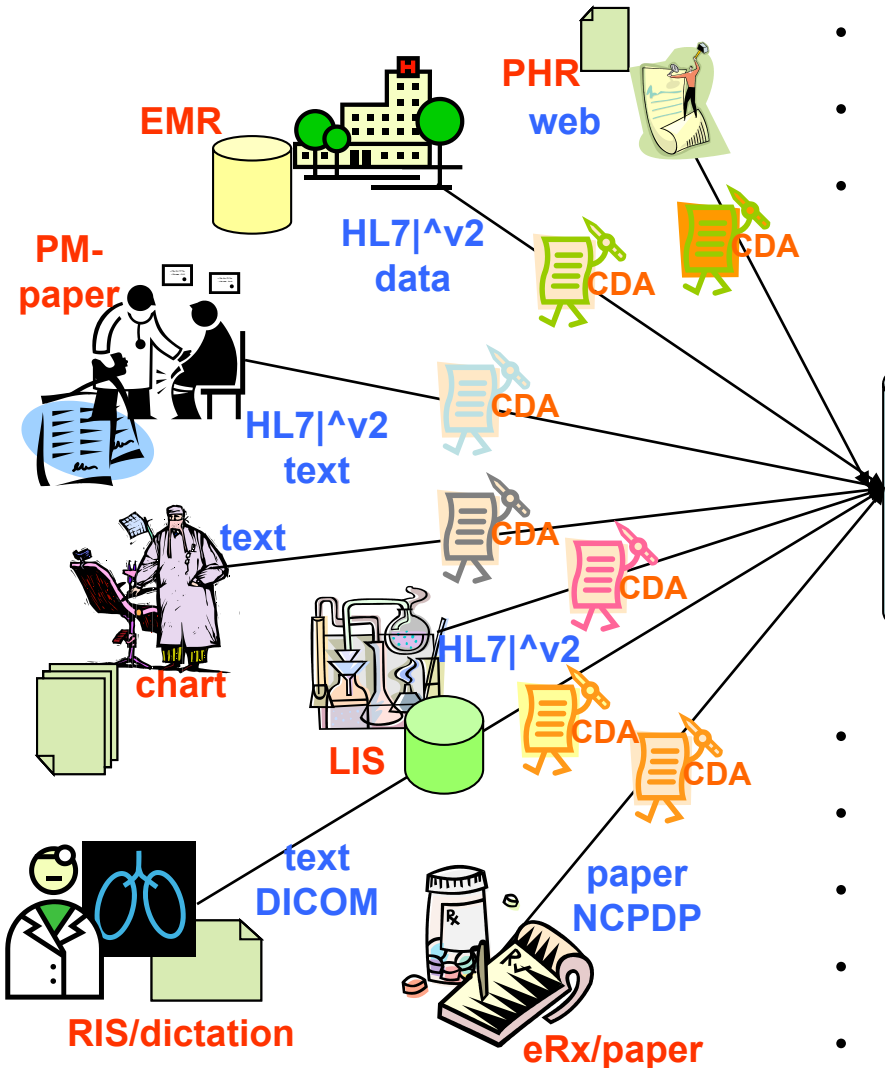

- Manual re-use supported by all levels of CDA
 - Human review from the local desktop, eliminates sneaker/ “auto” net
- Automated re-use supported *to the extent that coded data available*
 - Pilots show effective for clinical trials, decision support
- We can get to automated re-use incrementally, *as business drivers warrant*

-
- Roles defined in CDA Header
 - Patient (subject, record target)
 - Author
 - Authenticator, legal authenticator
 - Custodian
 - Document-based approach with unambiguous legal responsibility allows information sharing with clear lines of responsibility

CDA for PHR: Summary

- Patient–centric, patient–directed
 - Supports eMPI, patient identification across providers
 - Confidentiality can be specified for the document as a whole or pieces of it
- Open interface/data specs
 - Designed for broad–based interoperability
 - Header: the metadata required for content management
- Comprehensive record
 - All records, not just a summary
 - Everybody plays: benefits increase with better coding
- Supports re–use
 - Both manual and automated

CDA document-based network

- All transform to CDA
- Complete view of record
- No loss in computable semantics

- What is available?
- How do I get it?
- Can I read it?
- Can I import it into my EMR/PHR/CDR...?

- EHR
- V-EHR
- PHR
- Patient Portal
- Physician Portal
- Health Record Bank

AHIC Consumer Empowerment Use Case

- The following scenario is based on the American Health Information Community Consumer Empowerment Harmonized Use Case, with a focus on medication summary data.
- The Use Case calls for sufficient data exchange to enable the following activities:
 - Create medication history;
 - Update medication history;
 - View medication history;
 - Physician review of medication history with consumer;
 - Differentiate current from relevant past medications
- Everything shown in the scenario can be built today with existing or draft standards:
 - **Messaging:** IHE XDS or HL7 Medical Records;
 - **Summary data:** CCR or CCD;
 - **Vocabulary:** LOINC, SNOMED, HL7, RxNorm

Courtesy Bob Dolin, MD, Kaiser Permanente

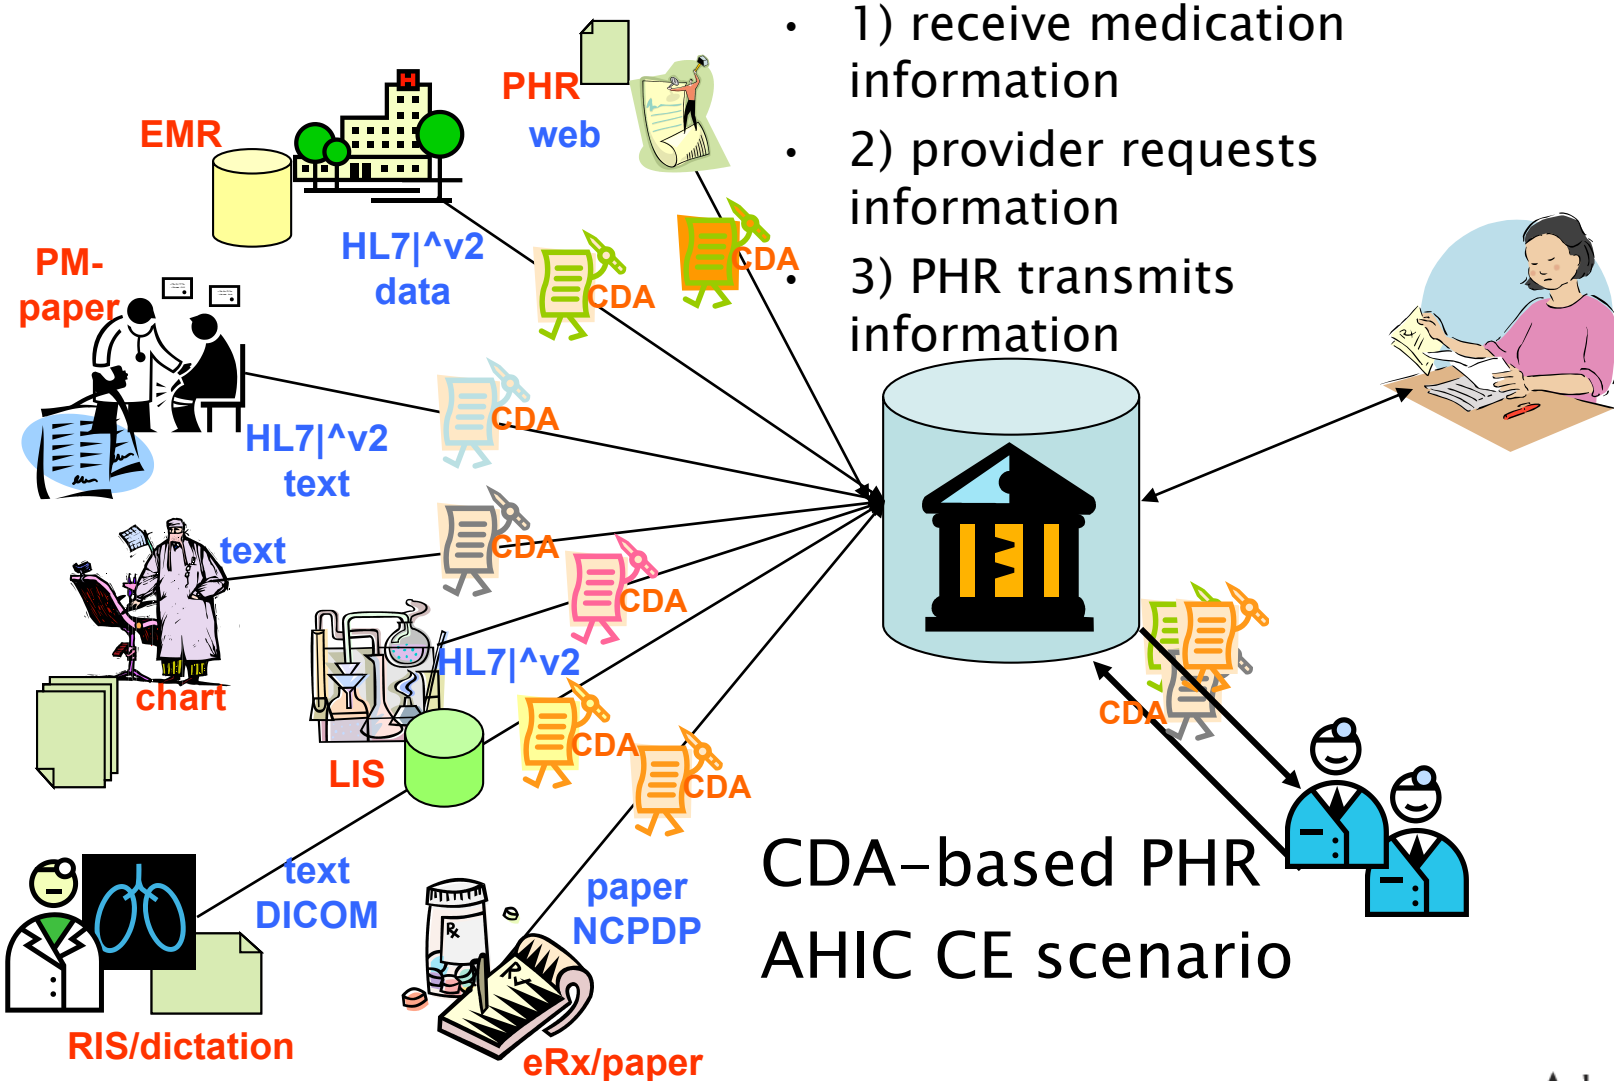

Empowering medication summary data

- 1) Provider of PHR Services receives medication information, from a variety of sources.
- 2) Health Care Provider requests medication information from PHR Provider. PHR Provider authenticates the request.
 - IHE XDS or HL7 Medical Records query message.
 - Query parameters include patient, document type (e.g. CCD, procedure report, consultation), author, etc.
- 3) PHR Provider transmits requested medication information. Health Care Provider receives medication information.
 - IHE XDS or HL7 Medical Records message, carrying a CCD.

Courtesy Bob Dolin, MD, Kaiser Permanente

CDA document-based network

- 1) receive medication information
- 2) provider requests information
- 3) PHR transmits information

Project Springfield

- Technical
 - Use simple electronic clinical documents
 - Use existing infrastructure: SSL and the Web
 - Leverage existing tools and products: PHR
- Business
 - Springfield Health Information Exchange
 - SpringHIE, a new, for-profit entity
 - Hosting a Health Record Bank for the Springfield area
 - Business model
 - Aligns costs/benefits: Provider, patient participation subsidized by payers
- Cultural: patient-centric, patient-controlled

SpringHIE

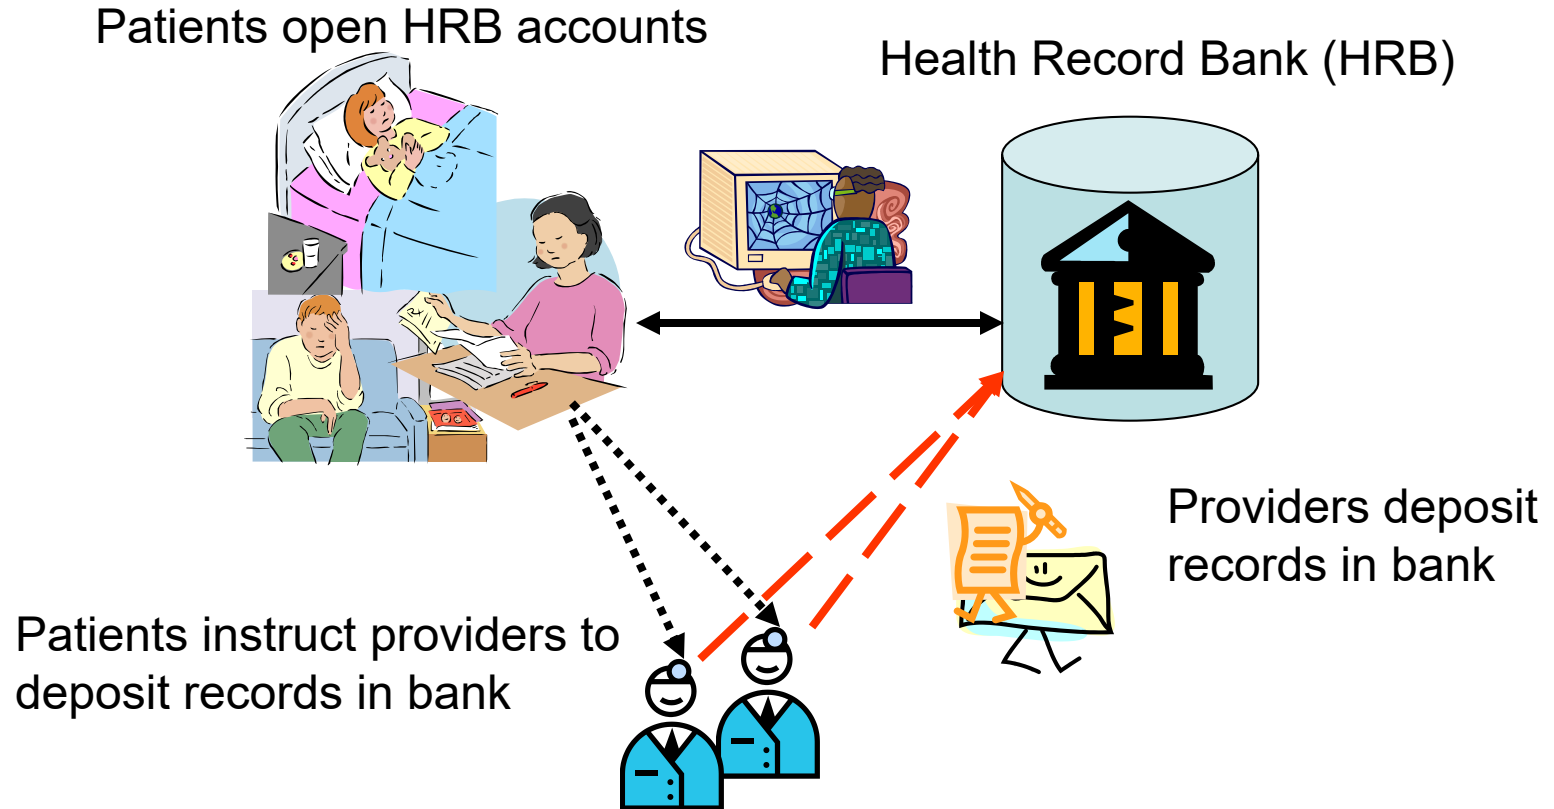

- Initiates
 - Recruits technical partners
 - Raises funds
 - Develops technical architecture and business framework
 - Creates community presence
- Implements
 - Partnership with co-developers
 - Contracts for development, as required
- Oversees
 - Patient/bank interactions
 - Maintenance of technical standards
 - HIPAA business partner agreements

The Health Record Bank

- A commercial entity
- A technology partner holding a business agreement with SpringHIE
 - Standards of operation
- Operates and maintains a repository for patient records populated by providers under patient control

SpringHIE: Initiation

SpringHIE: Usage

Patients view records,
grant viewing privileges

Payer views records with
permission

Providers view
records with
permission

Registry
accesses
records with
permission

SpringHIE: Privacy

- Patient sets access control
- Disadvantage: must justify access according to HIPAA
 - Treatment
 - Payment
 - Operations
- Advantage: trust

Outline

- The HL7 CDA
- CDA for Health Information Exchange
- CDA + CCR = CCD
- CDA Document Types
- CDA for Personal Health Records
- Summary, Resources & Questions

CDA for Interoperability

- HL7/ANSI specification based on
 - Reference Information Model (RIM)
 - Extensible Markup Language (XML)
 - Standard Terminology
- The spec:
 - Header+Human-readable report+(optional) computable semantics
- Industry acceptance:
 - Internationally implemented for 6 years
 - US: FHA, CHI, CMS, VA, DoD, NHIN, HITSP...
 - Vendor support: strong & growing
- Interoperability
 - Full patient record, not just the data that can be coded today
 - Full patient record – summaries and more, implementation guides in the works from multiple professional societies and agencies

Current Work

- HL7
 - Continuity of Care Document (with ASTM)
 - Medical Summary (with IHE, EHR Vendors Association)
 - Pathology reports (with CAP)
 - Imaging reports (with DICOM)
 - Claims attachments, migrate from R1 (with CMS)
 - Dental reports (with ADA)
 - Anesthesiology Reports (with Anes SIG)
 - Public health reports (with CDC)
 - ... *What are your priorities?*
